ABOUT ME

AI & Data Science undergraduate at GGSIPU with hands-on experience building AI-integrated mobile applications and end-to-end machine learning pipelines. Proficient in Python (NumPy, Pandas, scikit-learn) and Flutter, with practical exposure to RAG architectures, LLM integration via Gemini API, and classical ML workflows. Currently expanding into deep learning and NLP.

EDUCATION

B.Tech (AI & Data Science) : Guru Gobind Singh Indraprastha University	CGPA: 8.25
Arunodaya Public School (12th)	Percentage: 74.5%
Arunodaya Public School (10th)	Percentage: 75%

TECHNICAL EXPERIENCE

ProoV 2026

- Engineered predictive features (`car_age`, `mileage_per_year`) and resolved dataset anomalies to optimize data quality for machine learning models.
- Demonstrated the statistical superiority of Random Forest over Linear Regression algorithms by leveraging R^2 and MAE metrics for robust model selection.
- Translated technical model performance into actionable financial impact estimates for a CPO team, aligning data-driven pricing drivers with market intuition.

Smart India Hackathon (SIH) September 2025

- Built a cross-platform Flutter application featuring a responsive UI to solve a national-level government problem statement.
- Integrated an AI chatbot leveraging the Google Gemini API to enable intelligent, real-time user interactions and assistance.
- Implemented Firebase backend services (Auth, Firestore, Storage) and integrated the Google Maps SDK for secure, location-based navigation.

Criv Media August 2025

- Delivered user-centric UI/UX and graphic designs for digital platforms, ensuring strict alignment with client branding and requirements.
- Designed and developed responsive, high-conversion websites utilizing Framer to achieve clean aesthetics and intuitive navigation.
- Created comprehensive branding assets, engaging social media creatives, and impactful marketing visuals.

PROJECTS

GrindFlow – AI Study Companion [Live] [GitHub] 2026

- Developed a cross-platform Flutter AI study companion with a native PDF reader, implementing a full RAG pipeline for document chunking, embedding, and context retrieval.
- Integrated Google Gemini AI to enable dynamic document summarization, AI-assisted explanations, and auto-generated quizzes grounded in retrieved context.
- Architected a secure Supabase backend (PostgreSQL, Auth, Storage) leveraging Row Level Security (RLS) for scalable file management and multi-user data isolation.

ML Automotive Pricing Engine [Live] [GitHub] 2026

- Developed an end-to-end machine learning pipeline for VW and Audi vehicles using Python and scikit-learn, leveraging EDA to uncover market-specific depreciation trends.
- Engineered critical business features including `car_age` and `mileage_per_year`, dropping baseline Mean Absolute Error (MAE) by 75% from £6,078 to £1,486.
- Benchmarked Random Forest (R^2 : 0.95) against Linear Regression (R^2 : 0.83), deploying a high-accuracy predictive tool to optimize pricing for CPO dealerships.

Sikkim Tourism App [GitHub] 2025

- Developed a cross-platform Flutter tourism application integrating the Google Maps SDK to enable location-based navigation and interactive destination discovery.
- Engineered an in-app conversational AI chatbot to provide real-time travel assistance and dynamic query resolution for users.
- Implemented a robust Firebase backend for scalable data management and designed a modular app architecture to ensure long-term maintainability.

SKILLS

Languages:	Python, Dart, C++, Java
AI / ML:	scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, Gemini API, RAG Pipelines
ML Concepts:	Linear Regression, Random Forest, Feature Engineering, EDA, Model Evaluation
Mobile:	Flutter, Dart
State Management:	BLoC, Provider, Riverpod, GetX
Backend & APIs:	Supabase, Firebase, REST APIs, PostgreSQL
